Leq(m) has been used for over 15 years to measure and then control the level of trailers and commercials, both in the US and overseas. The method to be described takes a ten-minute rolling average of Leq(m) throughout an entire movie, and then integrates the values above a given threshold. The procedure is not intended to constrain the levels of movies, simply to come up with a metric to describe subjective loudness. A suggested descriptive is Leq(m10). Reposted. Accepted for publication and copyright SMPTE – reproduced by permission. Ioan Allen Author.</i></p> <p>Publication Date: 2016-03-15T07:00:00.000Z</p>  |
